Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

This Application has been examined. The claims 1-8 are pending. The examination results are as following.

Claim Rejections - 35 USC § 103-

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-8 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sasselli et al. (US 6,411,281 cited by Applicant).

Regarding claim 1, Sasselli et al. discloses in fig. 1, a wireless pointing device, comprising a body having an opening (18); and a power supply module (see battery 22 cover 26, and cavities 24); to be inserted into the opening in order to supply power from the battery to the pointing device, and to be drawn out from the opening for replacement of the battery (see fig. 1). However, Sasselli et al. does not disclose that the power-supply module is arranged to carry at least one battery. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have the power-supply module could be arranged to carry at least one battery because the cavities 24 could carry the batteries 22.

Regarding claim 2, Sasselli discloses further the body has a circuit board (52), and at least a metal plate (see spring 30, fig. 1) extending from the circuit board for electrically contacting the batteries.

Regarding claim 3, Sasselli et al. discloses the power-supply module has an obvious carrier for containing the battery as discussed above; each of side of the carrier having flange, and correspondingly each side of the opening having a groove (see 24 contains battery 22) for receiving flange.

Regarding claim 4, Sasselli et al. discloses that the power supply module is fixed to the body by a fixing device (fig. 1).

Regarding claim 5, Sasselli et al. discloses the fixing device includes a hook (38, fig. 3) located on the body, and a recess correspondingly located on the power-supplying module (fig. 1).

Regarding claim 6, Sasselli et al. discloses that the pointing device is a computer mouse (fig. 1).

Regarding claims 7-8, Sasselli et al. discloses that the pointing device is a wireless input device and could be a game controller.
